       var marker = new kakao.maps.Marker({
           map: map,
           position: coords
       var infowindow = new kakao.maps.InfoWindow({
           content: `<div style="width:150px;text-align:center;padding:6px 0;">${mapTitle}</div>`
        infowindow.open(map, marker);
       map.setCenter(coords);
```

#### Rest API를 이용한 댓글 CRUD 구현

```
private CmtService service;
public List<CommentDomain> list(CommentDomain p, @RequestParam("listCount") int listCount){
   p.setListCount(listCount);
   List<CommentDomain> data = service.selCmtList(p);
   return data;
@PostMapping
public int ins(@RequestBody CommentEntity p , HttpSession hs) {
   p.setU pk(sUtils.getLoginUserPk(hs));
   return service.insCmt(p);
public int upd(@RequestBody CommentEntity p, HttpSession hs) {
   p.setU_pk(sUtils.getLoginUserPk(hs));
   return service.updCmt(p);
public int del(CommentEntity p, HttpSession hs) {
   p.setU_pk(sUtils.getLoginUserPk(hs));
```

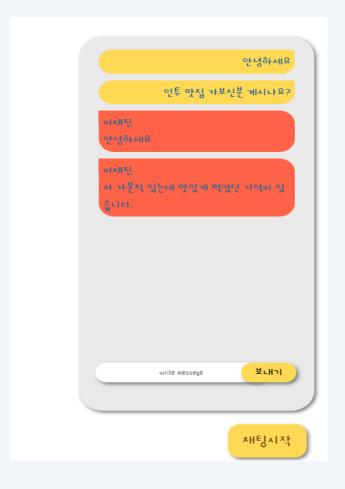

#### 웹소켓을 활용한 실시간 채팅

```
HashMap<String, WebSocketSession> sessionMap = new HashMap<>(); // 웹소켓 세션을 담아둘 맵
public void handleTextMessage(WebSocketSession session, TextMessage message) {
    String msg = message.getPayload();
    JSONObject obj = jsonToObjectParser(msg);
    for (String key : sessionMap.keySet()) {
        WebSocketSession wss = sessionMap.get(key);
             wss.sendMessage(new TextMessage(obj.toJSONString()));
            e.printStackTrace();
@SuppressWarnings("unchecked")
    super.afterConnectionEstablished(session);
    JSONObject obj = new JSONObject();
    obj.put("sessionId", session.getId());
    session.sendMessage(new TextMessage(obj.toJSONString()));
public void afterConnectionClosed(WebSocketSession session, CloseStatus status) throws Exception {
   sessionMap.remove(session.getId());
    super.afterConnectionClosed(session, status);
   JSONParser parser = new JSONParser();
      obj = (JSONObject) parser.parse(jsonStr);
   } catch (ParseException e) {
```

# The End
